SYRIA: Discussion Topics with Israeli Defense Minister Rabin

Summary

The following memorandum addresses several Syrian-related topics that Israeli Defense Minister Rabin is likely to raise during his visit later this month.

25X1

President Assad's determination to force a total Israeli withdrawal from Lebanon and his limited capability to impose tight control on Shia extremists or Palestinian reinfiltration into the South mean that terrorist incidents there are unlikely to diminish following the initial stages of the Israeli pullout.

25X1

There are indications of increased frictions between Moscow and Damascus, but we believe Soviet-Syrian relations remain intact. Moscow continues to regard Syria as its most important asset in the Middle East, while Damascus sees no alternative to the USSR as a reliable patron.

25X1

Syria has accelerated the modernization of its armed forces in an effort to attain strategic balance with Israel. Syria's reliance on more and better hardware, however, is unlikely to compensate for continuing deficiencies in manpower, training, and leadership, precluding the possibility of true military parity with Israel in the foreseeable future.

This memorandum was prepared by

of the Levant Branch, Arab-Israeli Division, Office of
Near Eastern and South Asian Analysis at the request of the
National Security Council. Information as of 23 January 1985 was
used in its preparation. Queries and comments are welcome and
should be directed to Chief, Arab-Israeli Division

bid for a thermal power plant over a technically superior Japanese offer, primarily on political grounds. The Syrians have also concluded an agreement with the Soviets to continue preparatory work for construction of a nuclear power plant and a small research reactor. Search for Strategic Balance The poor performance of the Syrian military during the Israeli invasion of Lebanon in 1982, demonstrated that Syria was far from attaining military parity and spurred Syrian efforts to rearm. With Soviet assistance, Damascus has fielded new armored units, nearly completed the mechanization of its infantry, significantly improved its air defenses, and has begun absorbing some of the latest Soviet military hardware such as the SS-21 surface-to-surface missile, the MIG-23 Flogger G interceptor and the Vektor-II command and control system. By mid-1984, the Syrian military was large enough to permit Damascus to fight simultaneously in Lebanon and the Golan Heights while still maintaining two divisions as a strategic reserve. Ground forces manpower probably now totals about 300,000. The major thrust in modernizing the Syrian Air Force has been expansion and the acquisition of advanced aircraft. The Air Force has more than doubled the number of its operational squadrons since 1973 and now has Soviet MIG-23 and MIG-23 interceptors and MIG-23 and SU-20/22 ground attack aircraft. The avionics and overall capabilities of the Soviet-supplied aircraft, however, are inferior to those of the Israeli Air Force. Syria has also expanded its air defense force, more than doubling the number of launchers and units since 1975, and has modified its mission and organization to concentrate on SAM defense of airfields.
